

Dear Paul,

5/12/81

In today's mail, attached to FBI response to interrogatories in the spectro case, are these annotated copies of xeroxes of supposedly all the JFK spectro plates.

I have no present means of checking out whether these represent all the plates made in spectrographic examination of the various specimens, but I am surprised to find that one plate includes so many different results, meaning so many different specimens.

Of course the cyrstone is not included. It allegedly was destroyed to save space.

There are other spectro examinations of which I do have proof that also are not included.

But of what is here, and they allege it is all, I think there may well be much wrong. For our knowledge and more, for our need to be informed for deposing Kilty, any information or suggestions you can impart will be helpful.

I'm now also not able to do the checking to identify each Q number. If you can, it would be quite helpful.

If you lack the knowledge but have friends or colleagues who have it, please do whatever you can.

Elsewhere in the responses there is overtly untruthful response and some evasions, so there also is no reason to assume the straightforwardness of this party.

Jim will be coming up in about two weeks for us to do what preparing we can for carrying this case forward. I think it can have real significance but I am also aware that I will be able to do much less than before, so it means a heavier load for Jim. Particularly if I am not able to be present at the taking of the deposition(s).

He plans to set the date for the Kilty deposition for before the end of the month.

Thanks for anything you can do.

Best wishes,
